

## Installation notes for "boot".#

1. Download the boot utility from [Software Updates 2010](#) page.

2. Unpack it:

```
# zcat boot.20100803.tar.gz | tar x
```

3. Compare the cksum results with the checksum posted on the Software Updates 2010 page.

```
# cksum boot
```

4. Backup the existing boot utility.

If you wish to keep a copy of the existing utility, you'll need to save them to a safe location first, to prevent them from being overwritten during installation.

```
# cp -vc /boot/sys/boot /oot/sys/boot.`date +"%y%m%d_%H%M%S"`
```

5. Copy the updated driver to the **/boot/sys** directory:

```
# cp boot /boot/sys
```

6. Make sure that the binaries are executable and that the file's owner and group are correct:

```
# chmod 775 /boot/sys/boot
```

```
# chown root:root /boot/sys/boot
```
